decisions under model uncertainty

Dr. Merlise Clyde

decisions with model uncertainty

model for data

$$Y_i \mid \beta_0, \beta_1, \dots \beta_p, \sigma^2 \stackrel{\text{ind}}{\sim} \mathsf{N}(\beta_0 + \beta_1(x_{i1} - \bar{x}_1) + \dots + \beta_p(x_{ip} - \bar{x}_p), \sigma^2)$$

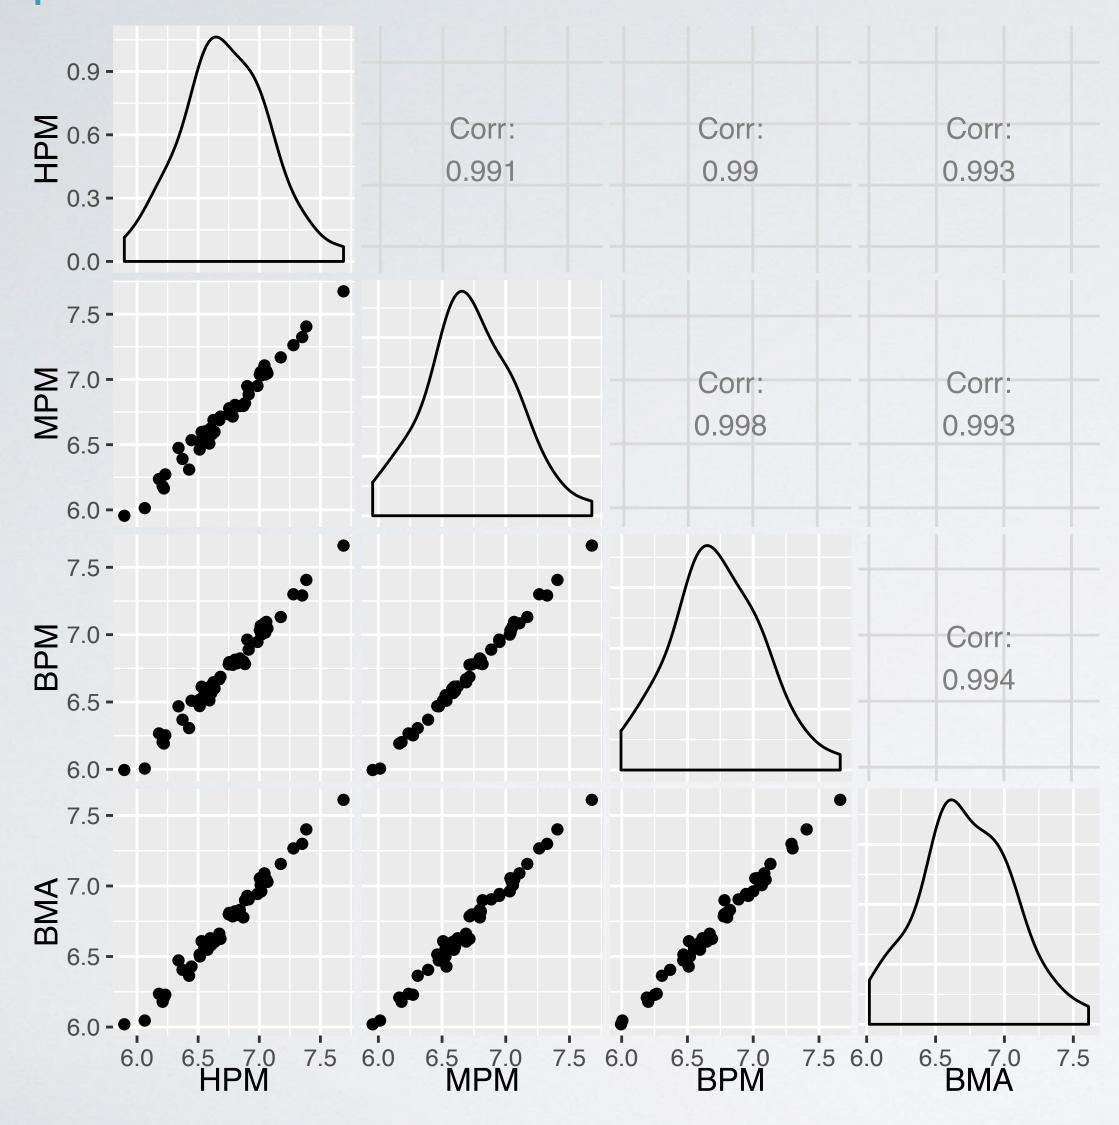

model uncertainty

objectives?

model choice

```
BMA
      Bayesian model averaging
HPM highest probability model
       M Ed Pol NW U2 Ineq Prob Time
MPM median probability model
      M Ed Pol NW U2 Ineq Prob
BPM best predictive model
      M So Ed Pol Pol M.F NW U2 Ineq
 R
 fitted(crime.ZS, type="BPM")
```

predictions

summary

- selection
- model averaging
- choice of prior over models
- In full model + alternative priors on coefficients
- other distributions
- more
